TANK CONTAINERS FOR STORAGE OF BULK LIQUIDS AND GASES

Land-based storage tanks require an extensive planning, permitting and construction process.

The steps in the pre-installation/ pre-construction process are extensive.

High costs are common. The decommissioning process for land based tanks can be time consuming, costly and can require additional permits for demolition, disposal of materials and soil remediation.

THERE IS A BETTER OPTION...

Intermodal, ISO Tank Containers: A flexible alternative to land-based storage tanks

CONNECT MULTIPLE TANKS

PIPING TO PLANT OPERATIONS

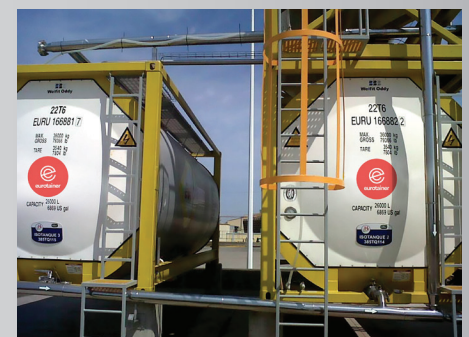

STACKING

TANK FARM

LOW ENVIRONMENTAL IMPACT, SUSTAINABLE AND COST EFFECTIVE

- Single tank containers available in a variety of sizes/types
- Multiple tank containers can be utilized to create a tank farm stored in-line at ground level or stacked
- Containers can be piped together and manifolded
- Global and immediate availability
- Time to install is usually measured in days & no heavy construction on site
- Tank containers are interchangeable - quickly increase or decrease total storage capacity and easily connect to plant piping.
- Liquid tank containers are built ready for heating and cooling for temperature sensitive product storage

- Optional handrails and ground level piping
- Limited site engineering required
- Municipal real estate taxes are commonly lower than permanent structures
- Paired with chassis for a quick storage solution
- End of project/decommissioning is a simple, low-cost & transparent process
- Capex commonly not required as leasing is often considered an operational cost
- Tank containers with coatings/linings are readily available for corrosive products
- High level of product security

Compatible with Eurotainer's Spill-tainers for an easy to deploy spill containment solution:

Add Eurotainer's Telemetry solutions for location tracking and product monitoring:
